3. Reasons for the Revision

(First Two Quarters Forecast)

Net sales are expected to be down slightly from the previous forecast. Operating income is projected to be higher than the previous forecast, due to improved market conditions for caprolactam (nylon raw material) in the first quarter of the fiscal year ending March 31, 2016, and lower prices for raw material and fuel such as for coal and crude oil. Both ordinary income and net income attributable to owners of parent are projected to be higher than the previous forecast, due to factors including an improvement in equity method profit in the affiliates.

(Full-Year Forecast)

There is increasing uncertainty surrounding economies in developing countries, as exemplified by the slowdown of the Chinese economy. Market conditions for caprolactam are projected to be sluggish in the third quarter of the fiscal year ending March 31, 2016, and beyond. However, the impact of lower prices for raw materials and fuel is expected to continue to a degree. As a result, net sales are projected to be down slightly from the previous forecast, while profits are expected to be higher than the previous forecast.

The dividend forecast is unchanged.
